

Custom Designed BOSCH DCN/IntegruS Simultaneous Interpretation System

Designed to the identified needs for our clients applications, this system is configured to manage 2 languages and 120 receivers. In addition the system integrates 2 Wireless Microphone Discussion Units, 20 base integrated line and base microphones (base and hand-held) for the use of presenter (base) and a handheld microphone for question and answer sessions. Each of the seven languages has 2 Disk Interpreter workstations.

This system was further customized to include a heavy-duty shockmount case in which all major components were mounted and pre-wired and preconfigured for the client's needs.

Pictured here are the system CGC and infrared transmitter along with the wireless microphone receiver units and gated field fan for optimum sound and functionality.
